

Phos-Life™

Pure mineral liquid suspension of micronised calcium phosphate

Plant available calcium and phosphate, together in a single, high analysis product, is not normally a possibility. The non-ionic nature of MMS products allows this highly productive combination. Phos-Life™ is a high analysis source of micronised guano formulated in a free-flowing suspension. Calcium and phosphate are the two principle elements involved in photosynthesis and plant sugar production but it is not normally possible to combine them in a single fertiliser due to their incompatibility. Phos-Life™ represents a rare fusion of these two elements in a plant available form.

BENEFITS

- A rare and unique source of natural liquid phosphate.
- Also contains high levels of calcium. Calcium and phosphate are the governors of plant health and high brix levels.
- Calcium and phosphate are normally incompatible in ionic form, but not in micronised, colloidal form.
- The mineral component can become plant available within days.
- Far more compatible with other inputs compared with MAP/DAP or calcium nitrate.
- Particularly applicable when nitrogen is not required in conjunction with calcium and/or phosphorus, i.e. MAP, DAP, calcium nitrate, etc.
- Easy convenient application.

PACKAGING:

1 L, 4 L, 10 L,
100 L, 1000 L

**MICRONISED
MINERAL
SUSPENSIONS**

Phos-Life™

APPLICATION RATES

Soil Ameliorant or Fertigation:

10 – 30 L/ha as required
Use higher rate for soil amelioration

Foliar Spray:

Vegetables

1 L per 100 L water up to 5 L/ha equivalent
Apply weekly or as required

Orchards & Vineyards

1 L per 100 L water up to 10 L/ha equivalent
Apply every 2 – 4 weeks or as required

Ornamentals & Turf

1 L per 100 L water up to 7 L/ha equivalent
Apply every 2 – 4 weeks or as required

Broadacre Crops

1 – 3 L/ha in 60 – 100 L water, depending on canopy closure, apply as required

Pasture

1 – 3 L/ha in 60 – 100 L water, apply as required

Spot-Spraying

50 mL per 10 L water, apply as required

Liquid Inject:

2 – 5 L/ha

Use a minimum dilution rate of 1 part product to 3 parts water. Rate will depend on crop, row spacing & soil type. Always consider N & P crop requirements for starters based on reliable soil test data.

IMPORTANT

- **Note:** Product in 1000 L tanks may weigh over 1 tonne. Forklift with 2 tonne lifting capacity is recommended.

STORAGE & HANDLING

- Store in a cool dry area out of direct sunlight. This product has been tested to store safely down to 5°C. Sedimentation may occur below 5°C. Do not pre-mix or store in diluted form. MMS products are very heavy and every care should be taken when handling these materials to avoid back injury.

Disclaimer: Any recommendations provided by Nutri-Tech Solutions Pty Ltd (NTS) or its Distributors are advice only. As no control can be exercised over storage, handling, mixing, application or use, or weather, plant or soil conditions before, during or after application (all of which may affect the performance of our program), no responsibility for, or liability for any failure in performance, losses, damages, or injuries (consequential or otherwise), arising from such storage, mixing, application, or use will be accepted under any circumstances whatsoever. NTS recommend you contact an Agronomist prior to product application. The Buyer assumes all responsibility for the use of any NTS products.

TYPICAL ANALYSIS W/W

Calcium (Ca) (as phosphate)	24.57%
Silicon (Si)	10.73%
Total Phosphorus (P)	10.71%
Phosphorus (P) (citrate insoluble)	7.56%
Phosphorus (P) (citrate soluble)	3.15%
Phosphorus (P) (water soluble)	20 mg/L
Total Potassium (K) (as organic)	0.15%
Manganese (Mn)	1.66%
Iron (Fe)	0.86%
Magnesium (Mg)	0.34%
Zinc (Zn)	0.14%
Copper (Cu)	162 mg/L
SG	1.5
pH	6.5 – 8.5
Conductivity	1 – 5 mS/cm
Appearance	Thick, mid-brown liquid, citrus odour

INSTRUCTIONS

Shake or stir well before use & maintain constant agitation. It is advisable to pre-mix, adding this product slowly while maintaining agitation in spray tank to prevent settling of solids. Will pass through 200 micron filter under ideal conditions, however, a coarse inline filter (500 microns/35 mesh) is recommended to ensure the delivery lines are free from particle contaminants from other sources. Where higher water rates are required for good foliar coverage, do not exceed maximum product rate per hectare. MMS products will leave a visible residue on leaves and fruit when used as a foliar. Avoid spraying close to harvest if produce is susceptible to staining. Sensitive foliage or plants should be test sprayed prior to full scale application. Frequencies are a guideline only and can be adjusted according to farm practices and/or in conjunction with crop monitoring. Ensure suitable spray conditions (e.g. temperature, humidity, wind-speed), prior to foliar application. Compatibility and/or performance cannot be guaranteed when combined with other products. Jar test for compatibility and spray test on small area before wide-spread use.
