

## product brief

### TripleTen™

full-spectrum liquid fusion fertilizer

**Triple Ten™ is a high-energy liquid fertilizer blend that provides a wide spectrum of macro and micronutrition along with chelators and growth stimulants.**

---

#### features & benefits

Triple Ten™ (10-10-10) combines a hot-mix NPK blend, chelated trace elements and natural growth promotants including fulvic acid, seaweed fertilizer and vitamins. Triple Ten is created using a hot mix NPK process. The result is that Triple Ten, not only has a strong NPK nutrient analysis, but it also carries the extra energy from the hot mix process. It is this extra energy that amplifies all of the positive nutrition and bio-stimulating power that is packed into Triple Ten, making it possible to get significant results at low application rates.

Triple Ten promotes healthy, vigorous growth, stronger root structure, more even fruit size and better colour, early maturity, better taste and shelf life, and increased yield.

---

#### where & how to use

Triple Ten can be used to provide crops with comprehensive available mineral nutrition, plant growth promotants, and chelators. Triple Ten is effective as both a starter and a foliar fertilizer on broad-acre crops such as corn, soybeans, forage and cereal grains. It has also been proven to enhance the quality and flavour of vegetables and fruits.

For enhanced photosynthesis and plant production, rotate sprays with Trio™ Foliar\* to complete the mineral profile with calcium, magnesium and boron.

---

#### liquid fertilizer makeup

Triple Ten contains a full-spectrum of nutrients including a 10-10-10 analysis of N-P-K, micronutrients, trace and ultra trace elements, fulvic acid, seaweed, vitamins, amino acids, vitamins, worm castings and triacontanol to promote primary and secondary plant functions, optimal immunity and highest production.

---

#### application rates and timing

Triple Ten can be used as a starter fertilizer, a foliar, or in fertigation. It can be used by itself or in rotation with other inputs such as Trio™ on all crops at rates between 1-8 L/ac, depending on crop type, crop stage and application method.

While this product can be used individually, the product is not intended to provide all the fertility needed by plants. The highest quality results can be achieved when this product is used as part of comprehensive crop fertility program.
